

ROUND-TINNED-COPPER-BRAIDED

Amiable Impex manufactures **Round-Tinned-Copper-Braided**

We manufacture and export **Round-Tinned-Copper-Braided**. Our range of Copper Conductor also includes **Round-Tinned-Copper-Braided**.

Round-Tinned-Copper-Braided are used as earthing straps and are also used in numerous electrical components. Highly copper flexible bare, tin & silver coated. Round braids are used for carbon brushes, relays, gaskets, telecom, automobiles, earthing etc.

Range	4 sq.mm and above
Wire Diameter	0.51mm to 3mm
Material	Electrolytic Copper
Finish	Bare Copper/Tinned/Silver

Other Finish in Round-Tinned-Copper-Braided:

Our wide range of copper braid products is available in the following copper wire finishes:

- ❖ Bare copper / Plain copper / red copper
- ❖ Electro tin plated copper
- ❖ Electro nickel plated copper
- ❖ 99.99% pure Silver electro plated copper
- ❖ Enamel coated, which insulates each wire
- ❖ And other finishes on request.

Even though many of our products are standard items, we also make special tailor made products made exactly to the requirements of our customers.

We use the finest quality material for **Round-Tinned-Copper-Braided** to ensure consistency of quality and performance, drawing on our supplier's decades of experience in drawing, stranding and braiding, as well as surface treatment.

Copper Braid Construction

The construction of Copper braid is usually written as:

48 / 30 / 0.15, where:

48 = the number of carriers

30 =the number of wires per carrier

0.15 = the diameter of each wire in mm

The cross sectional area (CSA) of a copper braid can be calculated from this information:

$(\text{Carriers} \times \text{wires per carrier} \times \text{wire diameter}^2 \times 3.142) / 4$

So, for a copper braid with the specification: 48 / 30 / 0.15, this would be:

$48 \times 30 \times 0.15^2 \times 3.142 / 4 = 101.80$

$=25.45 \text{ mm}^2$

Table of current ratings

To help you choose the right conductor cross-section depending on the current rating, we have prepared a table with some benchmark figures for you. For more specific information please consult our highly qualified engineers who have many years of experience in the design of electrical equipment and are able to provide technical advice on your application including temperature rise calculations, voltage drop calculations and vibration withstand capability. These flat copper braids can be made from electrolytic copper Cu-ETP (grade C101) or from oxygen free copper

Oxygen Free Copper

Oxygen-free high thermal conductivity (OFHC) copper is widely used in cryogenics. OFHC is produced by the direct conversion of selected refined cathodes and castings under carefully controlled conditions to prevent contamination of the pure oxygen-free metal during processing. The method of producing OFHC copper insures extra high grade of metal with a copper content of 99.99%.

With so small a content of extraneous elements, the inherent properties of elemental copper are brought forth to a high degree. Characteristics are high ductility, high electrical and thermal conductivity, high impact strength, good creep resistance, ease of welding, and low relative volatility under high vacuum. We supply a range of oxygen free copper for use in scientific, industrial and medical processes.

- Copper alloy 10100 oxygen free copper, also known in Europe as Cu-OF or CW008A to EN13601.
- Composition: Copper 99.99 %, Trillium 0.001 %
- Hardness: B30 - 40
- Conductivity: 101 %
- Tensile strength: 25 - 40 Ksi

In simple terms the thermal conductivity of pure copper is about 400 watts per meter. This means that a plate of copper with area A and thickness L whose faces are kept at a constant relative temperature difference of delta T will conduct heat at a rate of 400.
